**DETAILED ACTION**

1. Claims 9 and 31 are pending.
2. Amendment filed 11/07/2006 has been received and considered.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 9 and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Robinson, U.S. Patent No. 5,522,075.

As per claim 9, the Applicant describes a method comprising the following limitations which are met by Robinson:

a) running guest software in a processor mode that enables the guest software to operate at a privilege level intended by the guest software (Col 14, lines 12-15);

Art Unit: 2137

- b) identifying an attempt of the guest software to perform an operation restricted by said processor mode (Col 12, lines 50-53);
- c) determining that the attempt of the guest software would fail if the guest software was running outside said processor mode (Col 12, lines 20-60);
- d) allowing the guest software to attempt the operation in response to determining that the attempt would fail (Col 12, lines 20-60).

As per claim 31, the Applicant describes the method of claim 9, which is met by Robinson, with the following limitation which is also met by Robinson:

Wherein determining that the attempt of the guest software would fail includes determining that the guest software is running with insufficient privilege to perform the operation (Col 12, lines 20-60).

***Response to Arguments***

5. Applicant's arguments filed 11/07/2006 have been fully considered but they are not persuasive. Applicant argues that Robinson fails to disclose, "allowing the guest software to

Art Unit: 2137

attempt the operation in response to determining that the attempt would fail".

With respect to this argument Robinson teaches that a sensitive instruction cannot be performed in the VM mode (i.e. it would fail (see column 12 lines 50-51). When a sensitive instruction is attempted in the VM mode it is trapped to the VMM where it is emulated (i.e. executed) (see column 12 lines 52-60). Therefore, the attempted operation is allowed to be executed in the VMM and Robinson teaches each and every claim limitation.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2137

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
